METHODS AND APPARATUS FOR ACCESSING
INFORMATION FROM MULTIPLE REMOTE SOURCES

ABSTRACT OF THE DISCLOSURE

In accordance with the present invention a process is provided for interfacing a legacy application and internet-based application and for displaying information from each application in a frame of a multi-frame browser on a client workstation. Further, the interface system enables users to transact business with the legacy application based on information retrieved from the internet-based application, and to retrieve information from the internet-based application based on information retrieved from the legacy application.
